GENERAL AI ASSISTANTS (LLMs)

PROMPT ENGINEERING

- What Is Prompt Engineering?
- Difference Between Weak and Strong Prompts
- Tools and Extensions to Improve Our Prompts

CODING AGENTS

vs.

AI BUILDERS

CODING AGENT vs. AI BUILDER

	CODING AGENT	AI BUILDER
Target Users	Programmers and developers	Non-programmers and beginners welcome
Main Approach	Works directly with code and project files	Turns natural language into apps through a guided, visual experience
Existing Projects	Strong for existing codebases: bugs, refactors, new features	Often used to start new apps; generated projects can be changed too
Level of Control	Deep control over code, architecture and details	Simplified building; much of the complexity is hidden
Technical Knowledge	Programming knowledge helps guide and review the work	Much less needed; describe what you want in plain language
Final Output	Source code to run, test and deploy	A working app, often with built-in publishing

EXAMPLES Coding Agent **Claude Code / Google Antigravity IDE** AI Builder **Lovable**

WHAT IS AUTOMATION?

HOW DOES AUTOMATION WORK?

01

TRIGGER

The event that starts the automation. It tells the workflow when to begin.

02

CONDITION

The rule that decides whether to continue. It is checked before the next step.

03

ACTION

The task performed when the condition is met. It runs automatically.

AUTOMATION vs. AI AUTOMATION vs. AI AGENT

	AUTOMATION	AI AUTOMATION	AI AGENT
Core Concept	Predefined workflow that runs tasks automatically	Predefined workflow enhanced with AI	AI that works toward a goal with some autonomy
Workflow Design	Designed and defined by a human	Defined by a human, with AI in selected steps	AI determines and adapts the steps to reach the goal
Role of AI	None required; follows set rules	Handles selected tasks: understanding, deciding, generating	Interprets the goal, plans, selects tools, coordinates
Decision Making	Fixed rules and conditions	AI decides within specific workflow steps	Context-dependent decisions toward the goal
Flexibility	Limited to what was configured	More flexible in AI steps, within the workflow	Adapts its approach to results and context
Example	Send an email when a form is submitted	AI classifies a submitted form, then sends a relevant email	Given a goal like organizing a meeting, works out and runs the steps

CREATIVE AI

CREATIVE AI TOOLS

PRESENTATION TOOLS

Prezi

AI-powered presentation creation

Gamma

AI-powered presentation creation

Canva AI

AI-assisted presentation design and creation

VISUAL TOOLS

Higgsfield

Create images, videos, and voice content with Higgsfield AI from text prompts or references.

ElevenLabs

AI-powered voice-over and voice generation

MINI HACKATHON

PROJECT LINK

01

GENERAL AI ASSISTANT

Understand the task, explore ideas, organize the direction.

02

AI BUILDER

Turn the selected idea into a working prototype.

03

PRESENTATION

Prepare and present the idea and prototype.
